Survive and Thrive during Covid-19

Wednesday May 6, at 4pm central Dr. Duane Keller will present a free course on periodontal care for your patients in a Covid-19 world. You will learn how to evaluate the patient for SARS-CoV-2 with a saliva / sputum DNA or RNA analysis, how SARS-CoV-2 most likely invades the host, and how peroxide kills a coronavirus and provides a layer of protection against oral transmission of the virus. [Register today!](#)

Helping Patients with Delayed Care

Patients have delayed care for weeks or months. They need your help to treat gingival infections and better manage inflammation at home. Perio Protect is your solution. [This 10 minute video](#) reviews the scientific rationale behind Perio Tray therapy to reduce aerosols and the risk of oral transmission of the virus via saliva.
